The authors present new results of their own in most of the chapters. In doing so, they reflect the trend to view fuzzy sets, probability theory and statistics as an association of complementary and synergetic modeling methodologies. Medical diagnosis arena. The volume addresses the most significant topics in the broad areas of epidemiology, medical informatics and mathematics. Written by leading contributors to the area of epidemiology, medical informatics and mathematics, the book.

The most commonly used approaches to a mathematical foundation of the field of genetic algorithms are given, as ... Experiments on the implementation of automatic neural network generation using genetic programming and one using the process of trial and error is not only time-consuming but may not generate an optimal network. The use of evolutionary...
